

VLADIMIR MASTEPANOV

FRONTEND & MOBILE DEVELOPER

Barcelona | +34 622-45-09-98 | mastepanovmail@gmail.com | [GitHub](#) | [LinkedIn](#)

SUMMARY

Independent software engineer with 3+ years shipping web and mobile products end-to-end: architecture, offline-first data layers, custom rendering engines, and store release, as sole developer on every project. Specialized in React Native performance, SQLite data design, and custom UI/graphics engines (Skia, SVG, Reanimated).

TECHNICAL SKILLS

- **Core:** React Native, TypeScript, JavaScript (ES6+), React.
- **Graphics & Engines:** Skia, RN Game Engine, SVG Path Manipulation, Reanimated, Gesture Handler
- **Data & State:** SQLite (relational design), Supabase, Zustand, Redux Toolkit
- **Tools:** REST APIs, WebSockets, Jest, Git, GitHub Actions, EAS Build.

INDEPENDENT & FREELANCE PROJECTS

Jigsaw Puzzle - Mobile Game (React Native / Skia)

Freelance, revenue-share partnership, 2025-2026

- Built the full rendering engine handling 400+ interactive SVG elements using React Native Skia
- Achieved stable 60 FPS on mid-tier devices through selective rendering and SVG path caching
- Designed custom coordinate mapping for zoom/pan with precise drag-and-drop across scale levels
- Implemented procedural cutting logic generating dynamic interlocking piece shapes
- Configured CI/CD pipeline (GitHub Actions + EAS Build) as sole developer
- Passed Google Play review; release pending on partner's marketing timeline

Stattix - Attendance and Revenue Tracker for Tutors

Personal project, 2025

- Designed and built a CRM/billing app for private tutors: attendance tracking, payment plans, statistics
- Built billing logic for one-time payments, lesson passes, and time-limited bundles with automatic expiration
- Developed a state-rollback mechanism for session tracking to keep financial records accurate after manual corrections
- Built a SQLite reporting module for real-time revenue breakdown by source and period
- Integrated local notifications for expiring passes; configured CI/CD (GitHub Actions + EAS Build)
- [Link to Video Demo](#)

Language Learning App - Contributor

Freelance contribution to a third-party project, 2023

- Designed an offline-first SQLite data layer replacing static JSON, managing 2,000+ words and hundreds of quiz items
- Implemented a client-side spaced repetition (SRS) algorithm with state-dependent quiz flows
- Optimized list rendering for large vocabularies with controlled memory usage on constrained devices
- Built interactive flip-card animations tied to quiz state
- Project was not released for reasons outside development scope

EDUCATION

- **Ironhack** — Vue.js Bootcamp | Barcelona | 2025
- **Hexlet** — Frontend Development Program (1,500+ coding hours) | 2022
